October 30, 1978

Dr. Dave P. Chandler
Mattel Incorporated
5150 Rosecrans Avenue
Hawthorne, CA 90250

Dear Dave:

As per our phone conversation on Friday, here is a list of our requirements for a GIMINI development system.

Hardware Requirements

1	MC1610	Microcomputer module
1	RM1602 or RM1601, 8K Memory module
1	CC1600	Control console and module
1	PM1600	PROM memory module
1	CF1600	Card file
1	I/O1600	High speed header punch module
1	CA1600	TTY/E1A cable assy
1	CA1601	Reader/punch cable assy
3	GP1600	General purpose interface modules
1	EX1600	Extender card

Alternatively, if the MC1610 is not available, we can use the MC1600 with the resident firmware package as follows:

S16MTR	Monitor
S160DP	On line debug program
S16LDR	Loader
S16MDP	Memory dump

Software Requirements

In addition to the resident firmware we need the S16XSFT cross software package, the Series 1600 on line software package, and the Series 1600 subroutine library.

We look forward to hearing from you soon and to starting in on our project.

Very truly yours,

John C. Reykjalin
Vice President
